| **Bronze Based**         |                           |        |                                   |                             |                         |                      |                 |             |         |       |          | [Copper material with carbon additive to improve solid lubricant properties](#) indicates dry condition. | 1) Physical and mechanical properties is value just for reference measured based on ISO, JIS and JPMA standards. Actual product specifications are to be discussed. 2) Allowable maximum operation condition is value just for reference. |}
